December CHECKLIST

- Remember to change your furnace filter monthly during the heating season.
- Make sure that your fireplace is in safe working order. Check that the damper opens and closes smoothly and fits properly, to prevent heat loss. Check inside the fireplace to make sure that no bricks are loose or broken. Installing a chimney cap can cure a smoking fireplace by improving the draft.
- Make sure that your roof can handle the load of winter. Have the eaves cleaned this month. Inspect the roof for missing, lifting, cracking or buckling shingles.
- Wash windows to let in the maximum heat and light during cold winter days.
- Have carpets cleaned to spruce up your home for the holidays and improve indoor air quality.
- Make sure that your furnace has been cleaned and safety-checked for maximum operating efficiency.

WHY WAIT 'TIL SPRING? PLAN your RENOVATION now to beat spring rush and keep costs down

If you are planning to replace your kitchen, add a bathroom or renovate the basement, don't wait until spring – do it now! That's the advice from Homeservice Club president Richard Felton, who says that homeowners benefit from lower prices and faster service during the winter months.

"Contractors who are swamped in the spring are not as rushed in the winter months," he said. "They have more time to spend with customers and their prices are often lower. It's a win-win situation for the homeowner."

Whether you decide to renovate to improve your lifestyle, to upgrade your home or just to maintain your investment, here are some points to consider when planning your renovation:

- In terms of payback, the top renovations are interior painting (73%), kitchen (72%), bathroom (68%), exterior painting (65%) and flooring upgrades (62%). As a

general rule of thumb, you will recoup your investment on renovations that increase your home's value by up to 15% over the average price for your area.

- While you're renovating, consider what energy upgrades can be incorporated into the renovation: a high-efficiency furnace, improved ventilation, energy-efficient lighting, and water-conserving toilets and showerheads.
- Work with a professional

renovator to determine what's needed and to avoid costly complications down the road. They will also know if your planned project conforms to local building codes and zoning bylaws and help you get the necessary permits.

- Planning your project now means that it will be completed before the spring rush. And that, says Felton, is a good way to save money while adding value to your home.

\$20 OFF

MANAGING ENERGY wisely requires regular MAINTENANCE

(NC)—Does the thought of paying high energy bills to keep your home warm this winter concern you? One of the keys to keeping costs down is to manage energy wisely! Here are a few easy ways to keep your heating equipment running efficiently, while reducing your heating costs.

- Have your furnace inspected and cleaned annually. Having a qualified service technician check your equipment will help ensure that your heating system works efficiently and safely and will not let you down when the temperature dips.
- Clean or replace filters regularly. Appliances with clogged filters have to work harder and use more energy.
- Keep clutter away from the furnace.
- Install a programmable thermostat which allows you to automatically adjust temperatures in your home.
- Use ceiling fans to circulate warm air away from ceilings.
- Have caulking and weather-stripping installed around doors and windows to stop heated air from escaping.

Call the Club & make your home ENERGY WISE!

TURKEY TIPS

- A 6.75 kilogram turkey (15 pounds) will serve eight to 10 people.
- The rule of thumb is to allow 20 minutes per pound of cooking time at 325°F.
- The turkey will be easier to carve if you let it stand for 15 to 20 minutes after cooking.
